Dosage form is suspension for injections.

Biological Properties:

The vaccine induces immunity against FMD virus in 21 days after administration and immunity lasts for 6 months. The vaccine is safe and has no therapeutic effect.

Indication:

The vaccine is intended for prevention of foot and mouth disease in cattle, buffaloes, sheep, goats, camels and deer caused by type A, O, SAT-2viruses.

Administration:

On farms located in the buffer zone where vaccination has been carried out, young cattle shall be vaccinated starting from 4 months of age, young sheep and goats from 3 months of age and revaccinated every three months till the animals are 18 months. Adult animals shall be vaccinated every 6 months.

In outbreak areas all clinically healthy animals shall be vaccinated, in infected zones and on farms where no vaccination has been carried out all animals starting from the age of 1 day shall be vaccinated twice at 10-20 day interval. Afterwards young cattle shall be revaccinated every 3 months till they are 18 months of age. Adult animals shall be vaccinated every 6 months.

Dosage:

Cattle, buffaloes, camels and deer: intramuscularly (in the third upper part of the neck or in the area of the rump)

Sheep and goats: subcutaneously in the inner thigh.

Package:

The vaccine is filled in 10, 25, 50, 100, 200, 500, 1 000, 2 000 and 5 000 cm³ glass or plastic bottles of the respective capacity, sealed with rubber stoppers and capped with aluminum caps.

Shelf Life:

The vaccine shelf-life is 24 months since the production date if stored according to the required storage and transportation conditions. Do not use the vaccine after the expiration date.
